

## Technical Sheet

### FSS Footprint Display Stands

FSS footprint can be used for the display of posters, messages or brochures where wall mounted information is not possible. The restrained and elegant design means attention is focused on your message and not the product hardware. Information can be updated quickly and effortlessly using our unique paper suspension system.

FSS Footprint is suitable for any internal environment including corporate reception areas, conference centres, hotel lobbies, restaurants, showrooms, museums and galleries, airports and retail environments. FSS Footprint is used extensively in exhibitions, POS and other display.

**Base clamp detail**

The FSS Footprint base consists of 2 anodised hinged extrusions. There are two designs available - the aerofoil section and the linear section. Bases are available at 325mm wide as standard and can be made at any other size up to 1000mm wide.

Brochure holders are available as an optional extra. These are in the form of an extruded tray. Please enquire for further information.

Left - Aerofoil

Right - Linear

### Graphics Specifications

Graphics are sandwiched between the glass panels. Therefore, graphic sizes can vary.

Standard size 450mm W x 1200mm H

Up to:

Maximum size 1000mm W x 1200mm H
